## CHAPTER THREE Sweetgrass Woman

She kept the deer's head facing toward the east as she worked her flint knife, taking off the skin. The knife was little more than an edged stone, rounded on one side to fit the curve of her hand, but as it moved with quick, short strokes, her strong hands keeping it going in a rhythm as regular as that of the song she hummed, it separated the layer of tissue between meat and hide so smoothly that it was almost as easy as removing the clothes from a sleeping person.

"*Nolka*," she sang, "we thank you for giving yourself. This is the way you will help our people as the Great Mystery instructed." She was careful to keep the deer's eyes covered by her skirt as she worked. The deer's mouth was full of tender green grass, which she had picked for it. If the deer was not treated with respect, its spirit would speak to the chief of the deer nation. Then the chief of the deer would lead his people far away, and the Only People would go hungry.

### The Theft of Native American Land and resources

Government reservation policy throughout the 19th century had been devoted to relocating Native Americans to plots of land no one else wanted. For the most part, this meant arid areas in the West unsuitable for farming—those regions on the Northern Plains first designated by the Lewis and Clark Expedition as "the Great American Desert." Some Indian nations were luckier than others. The Navajos, for example, were allowed to return to their homeland and today live on the largest reservation in the United States, comprising some thirty-two thousand square miles in Arizona, New Mexico, southern Utah, and southern Colorado. But the land is desert, suitable, in the eyes of federal policy makers, only for the Navajos to eek out a living, largely through sheep grazing. Other Native Americans, like the Cherokees, on whose land gold was found at Dahlonega in the early 19th century, were forcibly removed to Indian Territory, originally an area encompassing most of present-day Kansas and Oklahoma.

Ironically, it is on these so-called barren lands that many of the mineral riches needed in the twentieth and twenty-first centuries are found. Americans' love affair with the automobile and their reliance on all forms of mass transportation, particularly the airplane, calls for large supplies of oil and petroleum, much the same as it did during the era of industrial growth in the early 20th century. World War I made clear that both defense and the United States' emerging role as the commercial/industrial leader of the world required fuel—coal, oil, and natural gas—for its ships, airplanes, cars, homes, and factories. After World War II and the development of atomic energy, uranium joined that list of needed energy resources, a sizeable amount of which was to be found on reservation lands. It is estimated that "one-third of all western low-sulphur coal, one-fifth of the country's reserves of oil and natural gas, and over half the nation's uranium deposits," lie beneath reservation soil.<sup>1</sup>
